

USEFUL FEEDBACK

Feedback for AAAH

- Increase the membership of Asia-Pacific region by getting Malaysia, Singapore, Australia, New Zealand, Japan, Korea, etc. which will help a lot to learn and collaborate with them

- Excellent conference – Congratulations!

- Maybe the South Pacific Islands can host a future meeting

- In all the other previous conferences, the presenters (case studies) were recognized by awarding them either by giving a certificate of some kind of token. I think this good piece of work should be continued, and at least after the conference a certificate should be emailed or posted to respective presenters. This is some kind of recognition for their hard work. Please think about it. Sri Lanka.

- Very encouraging also to witness the dynamics of the AAAH.

- Would appreciate for AAAH to have a mechanism for member countries to monitor and evaluate HRH systems status based on work plans/strategic plans.

Feedback regarding conference and parallel sessions

- PowerPoint presentation should be printed before to help in following discussions

- Please allow one day to have enough time for tour

- Conference materials should be included in the folder for referrals during the conference

like done in Sri Lanka

- Schedule is too tight
- Perhaps 3.5 days would be helpful

- It would be more convenient before the parallel sessions for the participants to receive the documents

- A good well organized conference. It was a brilliant idea to seize the opportunity of getting feedback on the WHO recommendation guidelines.

- May need capacity for policy and analysis for above activity

- Site visit needs to be improved

- Start meeting sessions should be on time.

- Require speakers to manage time properly.

- Need a good translator for the field trip and background information in advance

- More focus on regional issues/concerns discussion

Other feedback

- Congratulations for all organizers

- The more important thing for the next step is to put the guideline we have mapped out in the conference into practice in the neediest places – SERO, Sub-Saharan countries.

- From now onwards, I have to redefine the word “Quality” in medical education. A student with brain and empathy is true quality health professional. Good bye to meritology education system.

- You could have included ½ day sightseeing visit. In China

they took visitors to Great Wall and Forbidden City therefore the entertainment part is poor.

- This is my first time to attend such conference, and I would like to say here that, it was a very positive experience for me. Through that, I have learnt a lot from the shared experiences during the presentations and reflected on my country situation and how to make improvements, as well as creating awareness and mobilizing the department as well as the service providers to work together. Thank you Secretariat for AAAH and Vietnam.

- More civil society, NGO, university people should be invited rather than government people.

- Keep the good thing to reach the unreached people in the periphery. They deserve the health service.

Thank you very much for your inputs and suggestions. They will help us improve our work in the future. Should you have any further suggestions please do not hesitate to send us an email. We will highly appreciate it!

With warmest regards,
The AAAH Secretariat
