

However CHWs in the communities should be considered as helping hands for the Basic Health Staff especially midwives. As they are not paid or full time workers their contributions towards health system depends upon individual's willingness, the acceptability and development of the community and the appreciation and acknowledgement from health sector⁽⁷⁾.

Nowadays there is an improvement of community based activities in health programs recruiting a variety of commu-

nity based volunteers in the country by different organizations that had created a perplexity in the community based volunteers of the country. Nevertheless whether they are community owned resource persons(CORP) conducting community case management of malaria by Malaria control program, community based health promoters by Women and Child Health Development (WCHD) program, community support group (CSG) by Behavior Change Communication project or CHWs recruited by Basic Health

Section all the organizations that are accomplishing community based volunteerism should have a standardized and clear principles in managing CHW.

By strengthening the community based health volunteerism in the country and sharing information to CHWs of different names the community empowerment could be created so as to overcome the barriers of different epidemiological, geographical and socio-economic issues and reaching every community with helpful hands.
